Practical Activity: Enhancing a BMI Calculator

Objective

Improve an existing BMI Calculator program by adding a new BMI category and testing the updated functionality.

Tools Required

- Notepad or Notepad++
- Command Prompt or Terminal
- Java JDK installed

Instructions

Step 1: Open the Existing Program
1. Open Notepad or Notepad++.
2. Open your saved file: BMICalculator.java.

Step 2: Locate the BMI Category Method
3. Find the method named determineBMICategory.

Step 3: Modify the BMI Categories
4. Update the conditions to:
- BMI < 18.5 → Underweight
- BMI < 25 → Normal weight
- BMI < 30 → Overweight
- BMI < 35 → Obese

FAITH MANGOPE
TECHNOLOGY AND LEADERSHIP INSTITUTE

- BMI ≥ 35 → Severely obese

Step 4: Save and Compile
5. Save the file.
6. Open Command Prompt/Terminal.
7. Navigate to your folder using cd.
8. Compile using: javac BMICalculator.java

Step 5: Run and Test
9. Run using: java BMICalculator
10. Test different values including BMI ≥ 35.

Step 6: Extension (Optional)
11. Allow repeated calculations.
12. Improve output formatting.

Expected Outcome

The program correctly calculates BMI and displays 'Severely obese' for BMI ≥ 35.

Final Task

Update the BMI with more modifications and make it UNIQUE to you.

You are required to make use of all that you've learned so far in JAVA.
